

## Computer Animation | Maya-BatchRender - Renderfarm

### Qube Renderfarm Guide: Linux > Maya Resubmit

#### Scene setup

In order to prepare your scene for submission to the render farm, the following steps are suggested:

- Place associated assets in Folders, within a single project directory (Project folder)
- Scene setup**
- In order to prepare your scene for submission to the renderfarm, the following steps are suggested:

- Copy the entire project folder to your directory within /render on the
- tete** server.

- This can be done using the *Connect to Server...* option which can
- be found in the *Places* tab in the linux menu.
- The following settings should be used:

- Service Type:** SSH
- Server:** tete
- Port:** 22 (Optional)
- Folder:** /home/i1234567
- User Name:** i1234567
- (replacing i1234567 with your username.)

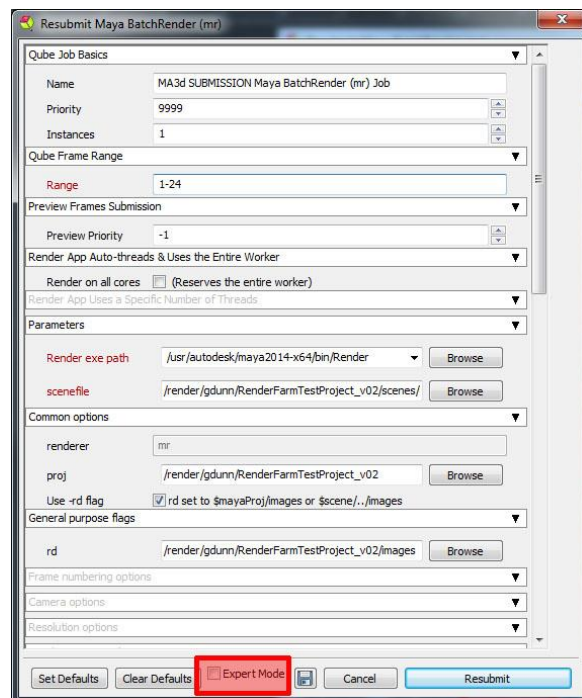

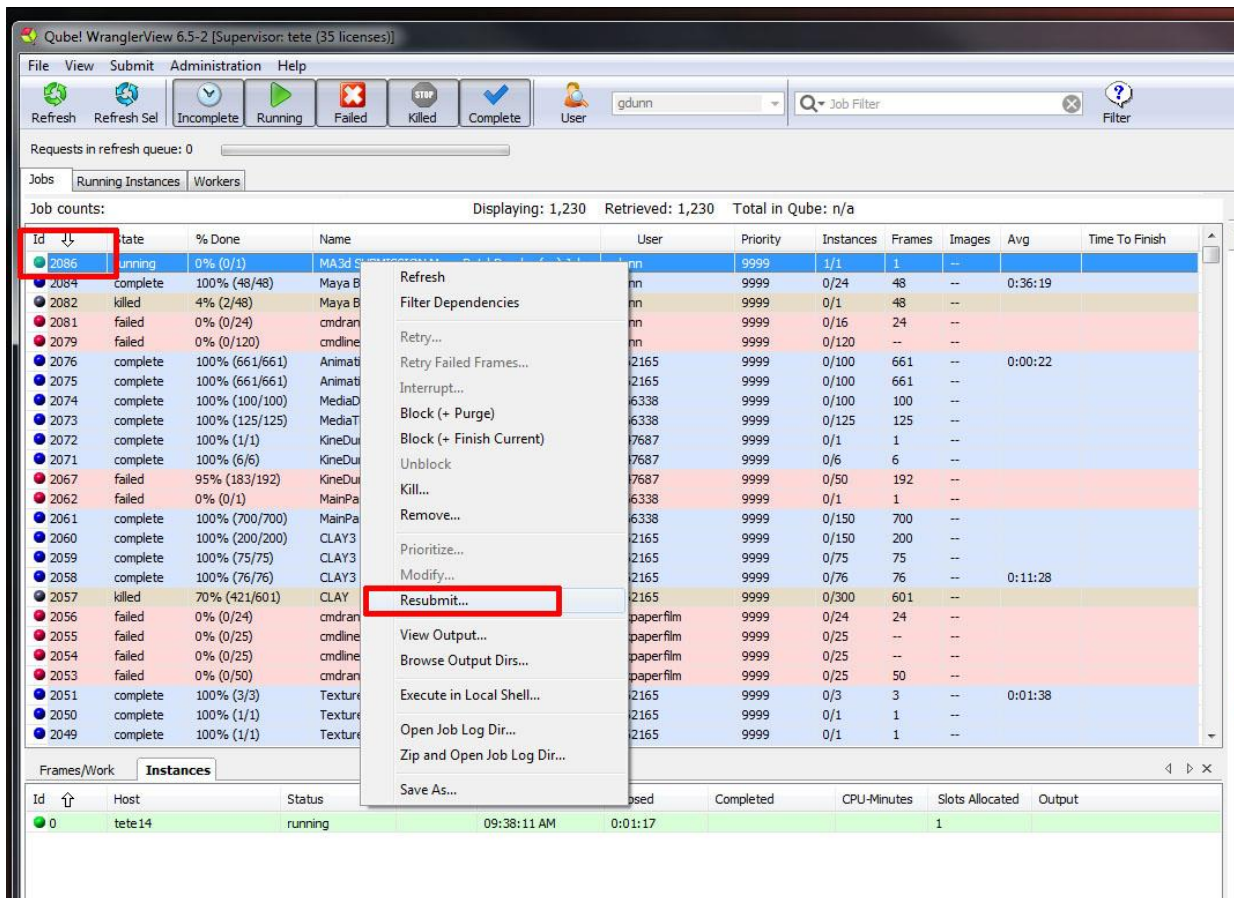

- It is sensible to add a **bookmark** to this location, so it can be
- easily accessed when setting up and accessing future renders.
- Copy and Paste can be used to copy your project directory into this
- directory ready for use on the render farm.
- Alternatively files can be copied using the **sftp** command line tool.

- Start Qube: goQube &

After the Qube interface has opened.

Find **Job: 2086 ( MA3d SUBMISSION Maya BatchRender (mr) Job )**

> Right Click and choose **Resubmit...**

Enable **Expert Mode**.

## Computer Animation | Maya-BatchRender - Renderfarm

### Suggested Settings

The following defaults are a good starting point for starting a Maya (mr) job on the renderfarm. Make sure you select **expert mode** at the very bottom for more options.

*(nb \*user, username will be your team / name or id number, project will be the project folder.)*

Where a path is required please type the full path location including /render/ at the beginning of where you copied your files to on the /render drive (as shown in the examples below). Do not use the browse button as this will take you to the local area on your machine.

*( \*user = username( i123... ) )*

**Name:** Name your Job

**Instances:** set to "40" or "number of frames" **whichever is lower.**

**Range:** Specify frame range in the format **start-end**. (eg: 1-24)

**Parameters:** Specify **Render exe path**. Set to /usr/autodesk/maya/bin/Render  
Specify path of **scene file**. (eg: /render/\*username/Project/scenes/your\_scene.ma)

**Common Options>proj:** Specify path of project (eg: /render/\*username/Project)

**General purpose flags>rd:** Specify path to render images (eg: /render/\*username/Project/images)

### Qube SimpleCmd and Shell Parameters

>Shell (Linux/Osx) /bin/bash

>Cmd Template: use this:

%(mayaEnvCommand)s" "%(mayaExe)s" -s QB\_FRAME\_START -e QB\_FRAME\_END -b QB\_FRAME\_STEP %(argv)s  
%(otherArgs)s "%(sceneFile)s"

### Qube Job Environment>

**Cwd:** Current working Directory. Set this to /home/username\*

Key: **HOME** Value: /render/username\*
